iPhone Development at MTS

## EASY SEARCH

### **What is this app? And why should I use this app?**

This app. allows us to arrange our favorite searches in an organized manner, so that it can be referred whenever the User wants to access that particular information.

With the functionalities of the app.. But what will I gain from using this app? Rather than going for the traditional or the direct way of doing the same work? Thus, helping the user to save the precious time and also makes the searches available in a systematic and user friendly manner.

By now you must be in a mood to try the app...Right?

And if right. then what next ??? Next comes the way of how to use the app ???...

So need some guidelines..?

### **Lets Go for it then..?**

There are 2 tags available with us. In the first one you can put the thing you are looking at or your query you can say. And the second one, will be the tags name by which you want to search it again. The query which you will put will be searched in Google.

Then press the almighty button "SAVE", which will save the whole data that can be referred afterwards.

Now, whenever you want the data or the search that is saved, can be looked at again by just tapping on the tag. The required data is displayed in the safari browser.

Now comes what if i get bugged up seeing the same tag names?that are displaying on the screen....???

### **Ohhh... what do i do? I would like to make some changes?**

Yeaahhhh.. sure you can make the changes. You can make changes by the "Edit" button that is present on the screen and modify the data accordingly.

Now what if I want to clean up all my screen? that is i am not much in use of the earlier search?

### **Can I remove or delete them?**

Ya.. you can..

option for that is also available.. use "Clear All Tags"

### Project Snap Shots
