iPhone Development at MTS

About MTS

Mobile Technology Solutions (MTS) is focused in designing, developing and delivering next generation wireless products based on GSM, CDMA, GPRS, 3G and 4G. We also provide technical consultancy in wireless protocol stack development and mobile applications development.

iPhone Application Support

MTS has capability to provide complete and integrated process for designing, developing, debugging and testing applications for iPhone and iPod touch.

We can support development activities for both **iPhone Web Applications** (web-based application that runs within the iPhone web browser (Safari). The applications are fronted with XHTML/CSS and JavaScript and backed by a programming language like PHP, Ruby on Rails and etc.) & **iPhone Native Applications** (applications built using the iPhone SDK. These apps run natively on the iPhone as opposed to on a browser).

Supporting facilities at MTS for iPhone Application Development

Hardware

- Mac OS X 10.5.5
- Mac PCs & PCs with Linux OS.
- iPhone test device

Software

- **iPhone SDK 2.2.1 includes**
